# NCR Mainstream POS Terminal

## For the specialty retail industry

Looking for non-stop reliability, innovative design and a low total cost of ownership?

YES

**Reliable, relevant POS terminal developed to meet your requirements**

The NCR P1530 is the newest product within NCR's mainstream line of POS terminals for the specialty retail industry. The highlights of its open platform include a highly-efficient, dual-core Intel Atom processor for greater performance, a bright 1024x768 LED color main display with a resistive touchscreen, lower power consumption and a reliable, stylish design. The mainstream POS terminal has been engineered and manufactured to provide sustainability, non-stop reliability, maximum uptime and a low total cost of ownership.

- **Serve customers faster**

  The NCR mainstream POS terminal combines superior processing power with top reliability. Increase your speed of service without sacrificing ease of use for your staff.

- **Gain product stability**

  By using Intel's embedded processor family, the P1530 offers product stability for many years unlike the traditional consumer devices that have short processor life spans. This provides a consistent configuration which is critical for rollouts that might last several years.

- **Install it anywhere**

  Our mainstream terminals can be used anywhere you need them, with rugged enclosures, fanless cooling and solid-state technology that can withstand spills without interrupting service.

- **Connect it to everything**

  Connectivity is maintained with four RJ12, three standard USB ports, one powered USB 12V and more. Connect directly to all the devices you need to serve your customers quickly and at low cost.

- **Add displays to engage your customers**

  Our 2x20 and 7" widescreen customer displays enable your customers to view orders, increasing order accuracy. Display advertising, promotions and specials to capture your customer's attention at the time of purchase.

**For more information, visit www.ncr.com, or call 1-800-852-5852**

## Key Features

- Standard Intel Architecture
- Industry standard storage (SATA interface for SSD), DDR3 memory, and USB/RS232 connectivity
